

No.	Name	Description	Priority	Rationale	Author
User					
1		The user shall create an account		Allows us to keep track of user	Jose Felten
1.1		- The user shall provide their username		Allows user to have a username	Jose Felten
1.2		- The user shall provide a secure password		Ensures security	Jose Felten
1.3		- The user shall confirm their password		Allows user to ensure password is what they want it to be	Jose Felten
1.4		- The user shall provide their phone number		Allows for MFA	Jose Felten
1.5		- The user shall verify their phone number		Ensures MFA is secure	Jose Felten
2		The system shall use the device location to find nearby relief systems.		Nearby centers help users quickly locate available help.	Kevin Beni
2.1		-The system shall alert users about hurricanes near saved locaitons		A short message gives the users clear information about the nearby hurricane.	Kevin Beni
2.2		-The system shall show each relief center's operating hours		Open status information prevents users from traveling to a closed relief center,	Kevin Beni
12		The user shall set notification preferences for hurricane alerts.		1 Users need control over how they receive time-sensitive alerts so they don't miss criti	Jon Luu
12.1		- The user shall choose to receive alerts via push notification, SMS, or email.		2 Offering multiple channels ensures the user gets alerts even if one method is unavaila	Jon Luu
13		The user shall add emergency contacts to their profile.		2 Emergency contacts allow loved ones to be notified automatically during a crisis.	Jon Luu
Admin					
3		The user shall moderate misuse of relief requests		Ensures security and integrity of the app	Jose Felten
3.1		- The user shall delete misleading relief requests		Ensures integrity	Jose Felten
3.2		- The user shall blacklist problematic users		Ensures our app is being used for valid reasons	Jose Felten
14		The system shall provide admins with a dashboard showing active relief requests		2 A dashboard lets admins quickly assess how well the relief effort is functioning and w	Jon Luu
15		The admin shall be able to add, edit, or remove relief center listings.		1 Relief center information changes quickly during a disaster, so admins need direct cor	Jon Luu
16		The system shall allow admins to generate a summary report of relief requests ar		3 Reports help admins and stakeholders evaluate the relief effort after the fact.	Jon Luu
		The admin shall review new relief request before they are posted.		2 Review helps keep incorrect requests from being shared, especially from bots.	Kevin Beni
		-The admin shall mark a relief request as resolved when help is completed.		1 Resolved requests are removed from from the active work list.	Kevin Beni
Volunteer					
4		The user shall enter their full name		Allows app to have user full name	Jose Felten
5		The user shall enter their home address		Allows us to map out users	Jose Felten
6		The user shall enter relevant skillsets		Allows us to best provide to user a good way help out	Jose Felten
7		The user shall view relief requests corresponding to relevant skillsets		Allows users to best use thier skillset	Jose Felten
8		The user shall respond to relief requests		Allows user of application to help	Jose Felten
17		The user shall set their availability schedule for volunteering.		2 Knowing when a volunteer is available helps match them to relief requests they can a	Jon Luu
17.1		- The user shall be able to mark availability as recurring or one-time.		3 Recurring availability saves volunteers from re-entering the same schedule repeatedly	Jon Luu
18		The user shall view a history of the relief requests they have responded to, along		2 A visible history gives volunteers a sense of their impact and accountability for their w	Jon Luu
		The user shall flter relief requests by distance		2 Distance filters help volunteers prepare before helping others.	Kevin Beni
		The user shall report when ttthey are unable to complete a request.		1 The request can quickly be made available to another user.	Kevin Beni

[illegible]

29		The system shall maintain 99.9% uptime during active hurricane events (Category 1+).		Allows max availability of use for the app.	Max Vogel
30		All user location data shall be encrypted in transit and at rest.		Protects user information and ensures confidentiality and integrity.	Max Vogel
31		The system shall support at least 10,000 concurrent users during a major storm event without degraded response time.		Allows for many different users at once	Max Vogel
32		The system shall support voice input for submitting relief requests		Allows for user to use the app when they are unable to type	Max Vogel
33		The system shall auto-scale backend infrastructure in response to traffic spikes without manual intervention.		Ensures the availability of the app	Max Vogel
34		PostgreSQL DB shall be used for this application		Allows for open source DB and allows for Post GIS.	Max Vogel
35		AWS shall be implemented into the application, AWS Pinpoint, AWS RDS, etc.		I have been wanting to learn AWS for a while now, this would be a great way to do so.	Max Vogel
36		User passwords will never be stored persistently, only the hashed values.		Ensures passwords are safe even in case of a data breach.	Max Vogel
37		The app shall alert the developers if there is any type of error in the application.		Allows for us to respond and fix whatever problem is happening.	Max Vogel
39		System shall be designed to operate within our budget range.		We do not want to be spending a crazy amount of money.	Max Vogel
40		System shall provide dashboard to devs showing health of app		Allows us to see if there is anything out the ordinary.	Max Vogel
41		The app shall minimize battery consumption during active hurricane tracking		Users may not have access to charge their devices for prolonged periods of time.	Max Vogel
