Introduction

Description of Product: Our team has partnered with a local non profit organization in order to make a hurricane recovery software that alerts people on local relief centers near them and how they can volunteer to help out with the project.

Goal: Our goal is to make it as easy as possible for someone wanting to help to provide assistance to the non profit. Either by sending money for supplies, going in person to assist in search and rescue missions, etc.

Business Problem Solved: The business problem that we are solving is about how people who want to help do not know where to start or even how they are able to help. This software will allow one to do this.

Stakeholder 1: Brian Schmidt - The Hands on Helper

Age: 30

From: Miami, Florida

Occupation: Plumber

Character: Courageous

Bio: Brian is someone who loves to be hands-on and help others when needed. He isn't very tech savvy, but he knows how to use basic applications on a laptop or phone.

 **TECH COMFORT:** ★★☆☆☆

 **WHAT HE NEEDS:**

Simple interface ★★★★★

Clear map ★★★★★

Easy directions ★★★★★

Live updates ★★★★★☆

 **GOALS:**

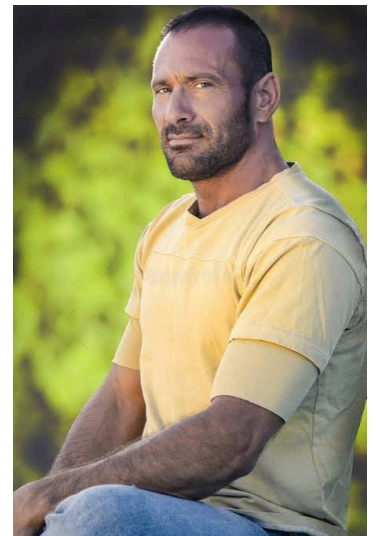

Quickly find communities that need hands-on assistance and use his blue-collar skills to help people affected by hurricanes.

 **PAIN POINTS:**

Difficulty navigating complicated technology.

Not knowing which communities need help the most.

Difficulty finding opportunities that match his specific skills.

Unclear directions or information about where volunteers are needed.
Limited connectivity in areas affected by hurricanes.

Stakeholder 2 - Julian Blaize - The CEO

Age: 35

From: New York City, New York

Occupation: CEO

Character: The Entrepreneur

Bio: Julian is a resourceful entrepreneur who loves putting the customer first. He enjoys working at a fast pace and turning ideas into useful products that solve real problems.

 **TECH COMFORT:** ★★★★★

 **WHAT HE NEEDS:**

Simple interface ★★★★★

High user engagement ★★★★★

Easy volunteer onboarding ★★★★★

Reliable platform ★★★★★☆

 **GOALS:**

Bring as many people as possible onto the platform and make the process of helping communities affected by hurricanes as simple and accessible as possible.

 **PAIN POINTS:**

Complex features that discourage people from using the platform.

A difficult or lengthy volunteer sign-up process.

Low user engagement or participation.
Slow development and unnecessary complexity.

Stakeholder 3 - Griffin Caleb - The Activist

Age: 21

From: Columbia, South Carolina

Occupation: Student at the University of South Carolina

Character: The Helper

Bio: Griffin is a busy college student who cares deeply about helping others in need. Although his schoolwork leaves him with little time to volunteer in person, he still wants an easy way to support hurricane relief efforts. He is very comfortable with technology and frequently uses online platforms in his daily life.

 **TECH COMFORT:** ★★★★★

 **WHAT HE NEEDS:**

Simple interface ★★★★★

Quick donation process ★★★★★★

Mobile accessibility ★★★★★★

Relief updates ★★★★★☆

 **GOALS:**

Support communities affected by hurricanes without requiring a large time commitment. He wants to quickly contribute to relief efforts through donations and stay informed about where his support is going.

 **PAIN POINTS:**

Does not have enough free time to volunteer in person.

Long or complicated donation processes.

Unclear information about where donations are going.

Having to spend too much time finding ways to contribute.

Constraints

Constraints are any sort of friction that our team could experience while developing this project. Some things that might come up in the future will be:

1. Scheduling for meetings and meeting up
2. Communication with CEO of non profit in regards to what they want in their product.
3. Meeting each deliverable within the necessary timeframe.
4. Ensuring our product is easy to use
5. Technical factors such as what tools we will use to develop the software.
6. Budget needed to develop project

Description:

This software should be able to be used by anyone in the world. Our team will first make it a website, then develop a mobile app depending on how the website goes. We need to implement web hooks for donation payments, GPS tracking for local hurricane relief centers near the user, and what the hurricane relief centers need people to help with.

Functional and Non-Functional Requirements

This link above contains both our functional and non functional requirements

Competitive Analysis

American Red Cross	Provides disaster relief information, donations, and volunteer opportunities. However, our software will focus on quickly connecting users with local hurricane relief centers and showing exactly where and how they can help.
VolunteerMatch	Helps users find volunteer opportunities based on location and interests. Our software is more specialized for hurricane recovery, providing nearby relief locations, real-time needs, directions, and donation options in one place.
FEMA	FEMA provides disaster alerts, recovery information, and resources for people affected by

	natural disasters. However, our software focuses on people who want to help, allowing them to find nearby hurricane relief centers, see what assistance is currently needed, and quickly volunteer or donate through one platform.
--	---

Our Competitive Advantage:

Our software combines local hurricane relief information, volunteer opportunities, GPS-based relief center locations, and donations into one simple platform. Instead of requiring users to search through multiple websites to determine how they can help, our goal is to make helping a hurricane-affected community as quick and easy as possible.
